Not that anybody is complaining, but the reptoid invasion of Earth appears to be a bit late. In 1993, a source called Cosmic Awareness said reptoid armies were supposed to arrive in full force in the last half of the Nineties, most particularly by 1999. Other lore connected this with an asteroid called 1991VG that was a mothership filled with Reptoids. Everybody not enslaved by implant devices would be eaten up. Some Draco-reptoids were already here in the Dulce Base, encaged in Level 7 - Nightmare Hall. The Lear statement of 1987 also spoke of reptile-skinned aliens discovered in crashed ufos, highlighting a piece of retrieval esoterica previously known mainly to readers of Leonard Stringfield’s works. The more respectable ufologists held this material as obviously beyond the fringe, the work of channelers and hoaxers.

We start with this stuff to emphasize the point that the existence of reptoids was accepted and spread first, not among the upper echelons of ufology, but the lowbrow and mythomanics. Even now, reptoids are associated in many folks’ minds with the work of conspiracy theorists like David Icke and “Branton” or Sheldon Nidle, a New Age revisionist whose history incorporates Atlantis, Lemuria, Hyperborea, and space-faring Cetaceans. Respected ufologists are rumored to be warily beginning to accept reptoids might be a real species of alien; the sheer mass of testimony overwhelming their initial rejection.

Reptoids are popular on the Web. There is a Reptoids.com site. David Icke has an impressive site called Reptilian Research that collects together a lot of serpent lore from antiquity placed aside some lurid modern tales of reptoid rape. Another site called “The Reptilians: Who are They Really?” collects pieces about Pamela Stonebrook, a jazz singer whose claims of sexual encounters with reptoids are colored with dense New Age metaphysics. This site has a large number of links, which, if you bother to follow them all, immerses one in channels and New Age babble.

It is curious to realize that, to date, Mantis aliens have not generated a fraction of the interest we see here. There is no Mantis.com, compilations of Mantis links, nor much commentary about them. Compiling a census of reptoid encounters is fraught with ambiguities. There have been a fair number of lizard-men encounters in Fortean literature over the years that have no connection with UFOs. There have also been a fair number of cases where an entity has a single trait that has a reptilian quality, but otherwise looks like something belonging to a different category like the Grays, mongoloids, or miscellaneous alien exotics. I will assert there is a minimum of 30 UFO encounters and abductions that I have seen and could reference as fitting a strict definition of alien reptoids. I don’t doubt others will say there are many more, and my sole reason to offer any number at all is merely as a crude yardstick to state they seem much fewer in number than Grays — minimally, about 250 reports known to me - but roughly similar to my count of Mantis aliens, maybe a little more.

More interesting statistics can be found floating around at 1992’s MIT abduction study conference. John Carpenter was asked, “What percentage of aliens does the reptilian type represent?” His answer: “About ten percent.” In the C.D.B. Bryan account of the conference, we are told that Carpenter asked the audience how many had heard of or seen the Reptilians and it is roughly half the number who had heard of Nordics. Bullard, in a separate paper, notes that three of nine investigators never had reptilian or insectoid beings in their files. Five had 1-10%, and one had 11-25%. No separate statistics for reptoids were attempted by him. In his study of 270 pre-1985 abductions, Bullard mentioned only one reptoid — the 1978 Italian case of Fortunato.

From the Chairman
David Bloomberg

Almost at Our Tenth Anniversary – and We’d Like to Hear from YOU!

February’s Newsletter marks REALL’s 10th Anniversary! We’d like to hear from you about what the past ten years (or however long you’ve been a member) have been like. What topics have you seen come and go? What have you seen come and stay? How has REALL helped? Or just any general thoughts on the state of fringe beliefs. Send in your thoughts, whether just a few lines or a full article, to chairman@reall.org!

January Meeting

At our Tuesday, January 7, meeting, we will be showing an hour-long Dateline NBC investigative documentary examining the popularity of faith healer Benny Hinn, who reportedly rakes in $100 million a year in donations from people seeking medical miracles. Yeesh. The video includes interviews with former Hinn Ministries employees who are critical of Hinn and his group. The showing will be followed by discussion of faith healing. Yes, folks, it’s still with us. Some things just never go away. (One reason for the 10-year retrospective mentioned above.) I hope to see you there!

Purpose

The Rational Examination Association of Lincoln Land is a non-profit, tax-exempt 501(c)(3) educational and scientific organization. It is dedicated to the development of rational thinking and the application of the scientific method toward claims of the paranormal and fringe-science phenomena.

REALL shall conduct research, convene meetings, publish a newsletter, and disseminate information to its members and the general public. Its primary geographic region of coverage is central Illinois.

REALL subscribes to the premise that the scientific method is the most reliable and self-correcting system for obtaining knowledge about the world and universe. REALL does not reject paranormal claims on a priori grounds, but rather is committed to objective, though critical, inquiry.

The REALL News is its official newsletter.

Annual Membership Rates: Regular, $20; student, $15; family, $30; patron, $50 or more; subscription only, $12.

Though Lewels seems to regard this similarity as a vote for the

abductees cannot bear to look at photos of the Russell creation
because the resemblance is so close to the terrifying beings.10

Though Lewels seems to regard this similarity as a vote for the
plausibility of such beings, this overlooks the fact that Russell’s
creation is highly speculative. Certain features like the absence
of ears and yellow eyes with vertical slit pupil are pure guess-
work since fossils obviously do not preserve such things. Rus-
sell specifically admits the ears were omitted strictly as an artis-
tic choice to avoid a more human appearance.11

At the M.I.T. abduction study conference, Carpenter noted
that Reptilians could arguably be psychodynamic in origin, but
vaguely denies it, saying, “the slowly emerging pattern of data
does not support this interpretation as yet.” What that pattern is,
he did not say. But let me be more indiscrete and offer a robust
pattern worth considering in counterpoint.

Anthropologists have commonly observed that myths and
visions involve therioanthropes. This is a fancy term for man/
animal combinations. Typically, the animal half involves one of
particular importance to the society of the visionary. Thus the
San people, who depend upon herds of elands, have visions in-
volved an amalgamation of eland and man. Thus, in the region
ruled by antiquity’s great bull cult, one sees the Minotaur and
other bull-men analogues.12

Modern American culture, for whatever reason, clearly has
a huge fascination with dinosaurs. The late Stephen Jay Gould
has waxed eloquent of how dino-mania has grown from being a
symptom of nerds and misfits in the ‘40s and ‘50s to, “during
the past 20 years… a steady level of culturally pervasive popu-
larit.”13 Donald Glut’s The Dinosaur Scrapbook (Citadel, 1980)
can also be offered in evidence for its collection of hun-
dreds of images and items that have saturated the modern
imagination. When Russell first released information about his
sculpture of the evolved dinosauroid, he got more than 1000
letters from people wanting pictures and more information. This
was an unprecedented response at his museum. He also got so
many calls from reporters that he decided to stop answering his
phone.14 The image in due course appeared in major network
news shows and was featured in various popular science maga-
zines like Omni and Science Digest.

Let us also add to this an observation that reptilians are sec-
cond only to humanoids in frequency among the form of alien in
comic books. A file of alien races from The Official Handbook
of the Marvel Universe has 19 reptilian races. Though far less
than the 91 humanoid and semi-humanoid races listed, it is well
more than the eight examples of insectoid races and three ex-
amples of amoeboid races. Still farther down in frequency are
forms based on fish, plants, cats, dogs, snails, horses, hippos,
pigs, and sentient energy. There were additionally some rather
prominent reptoids in popular culture in the period preceding
their spread through UFO lore: V (1983); Dreamscape’s Snake-
man (1984); Buckaroo Banzai’s lectroid Emilio Lizardo (1984);

Obviously, one can also offer a huge genealogy of prede-
cessors of lizard men not only from science fiction (from Love-
craft to the Black Lagoon to Star Trek’s Gorn) but ancient myth
(Egyptian crocodile god Sebek, the Hindu Nagas, the Toltec
Quetzalcoatl, the Greek Typhon, and the Biblical Serpent of
Eden). It’s been said, “There is probably no creature which is
found more widely distributed in the mythologies of the world
than the serpent.”15 If there is any psychodynamic mystery in
this, it is only why reptoids were so rare in UFO literature in the
period 1947-1985. There was a culture about dinosaurs extant
and even a large reservoir of lizardmen imagery in that period.
But, we have Gould’s testimony that dinomania belongs mainly
to the past 20 years. One can probably add that abduction ac-
counts become more deeply horrific in the ‘80s and, thus, pro-
vided a better environment for malevolent symbols such as the
analogous Big Bug mantis. So, even this is objection looks an-
swerable.

There is probably a skeptical obligation to insert here that
Russell’s dinosauroid has been given a vote of no confidence
by one of the grand masters of biology, Ernst Mayr. Reports
Joel Achenbach, “Dinosaurs, he said, were almost certainly
cold-blooded, contrary to some fashionable latter-day reports.
There are no intelligent cold-blooded creatures. Hot blood is
necessary to operate a big, intelligent brain.”16 Anthropologists
seem to agree that large brains are metabolically expensive and,
so to speak, might be beyond the energy budgets of any lizard.
Granting there is some wiggle-room in analytic methods, it is
roughly evident that mammals tend to be ten times brainier than
their reptilian analogues.17

One can afford to be generous here and allow that evolu-
tion creates such amazingly unpredictable combinations of
traits here on earth that the evolutionary pathways on other
worlds may not forbid a reptilian headed human torso arising.
For me, at least, it seems less unthinkable than giant mantis
gods18 or perfect Nordic blondes.19

The more telling objection remains that reptoids are just
too perfectly explicable. They fit American cultural observations
like a glove. They make ideal aliens, great bad guys, cool evo-
lutionary demons. Unless one descends to argue all therioan-
thropes are psychodynamically opaque, the fever that American
culture has for reptoids is another symptom that ufology is not
going to fare well if science ever sinks its teeth into the subject.

("Reptoid Fever continued on page 5")
Breeding a Satanic Panic
by Rob Hardy

It was a great show while it lasted, the subject of fervent newspaper reports, television specials, and an expose' by Geraldo Rivera in the 1980s. Satanism was rampant across America, nay, the world, with protean manifestations, if people would just pay attention. Twenty years before, there had been Satanism, but it was not very well publicized and not very interesting. But somehow it became the fashionable scare. How did this happen, and what should we do about it?

Bill Ellis is a folklorist, and an academic specializing in English and American studies. His book, Raising the Devil: Satanism, New Religions, and the Media (University Press of Kentucky) attempts a sympathetic understanding of how the Devil made one of his cyclic emergences and how folklore can affect society and politics. Scare about Satan and witchcraft have been present for centuries, and seem to give a safety valve for social aggression, scapegoating deviant individuals. At the individual level of, say, someone who thinks he is possessed by a demon and someone who thinks he can cast that demon out, there is a social agreement on a folkloric belief that may be beneficial for both concerned (if not for the demon).

If, however, social groups take the folkloric belief over and attempt to use it to push a religious or governmental agenda, then aberrations such as the Satanic Panic can occur, and this is what Ellis demonstrates happened. The Pentecostal-type churches started making inroads into both Protestant and Catholic faiths around 1960. Such believers relied on immediate contact with the divine world, such as going into ecstatic trances or speaking in tongues. They also believed in the complimentary and opposite process of demon possession, which could also produce trances and magical language ability, and which could be countered by the deliverance of casting out of demons. Possession by the Holy Spirit and possession by demons turn out to be two sides of the same coin. When the deliverance movement was criticized by skeptics or liberal Christians, it could easily explain such attacks as satanically inspired; but there was eventual criticism of the movement from fundamentalist Christians, who claimed that both exorcism and speaking in tongues were forms of devil worship, or giving the devil too much of his due. One of the more popular members of the deliverance movement was surprised when even glossolalia-believing Pentecostals said his work was demon-possessed and glorified Satan. This sort of infighting seems to be par for the course as different belief groups jockey for attention.

Those who attempted to demythologize such ideas would simply wind up in Hell, the story went. There seemed to be confirmation from Satan on this matter. A Catholic team authorized to exorcise a 24-year-old college student in 1975 found that the demons in her had much to say about the liberalizing Second Vatican Council. One of fifty demons expelled from a student, reported in 1971, explained that demons were bringing modernists and liberals into the schools because they are demons' companions. It would seem that demons have a particular political agenda.

Ellis explains how in response for the need for direct involvement in myth, the Charismatic movement encouraged rituals that enabled a person to feel overcome by divine spirits. The movement actively campaigned against the use of the Ouija board, but Ellis finds that the use of the Ouija exactly parallels exorcism: an evil spirit is invoked, questioned, confronted, and sent away. The teenagers who customarily use the Ouija, however, play with it for a while and then go on to something else; those who participate in the deliverance ministry have signed up for a long process of finding and countering demons of various kinds.

The deliverance ministry began to define the kinds of demons and what activities they participated in. demonic oppression seemed to Pentecostals and to other fundamentalist Christians, starting in the seventies, to be inspired by a huge network of Satanists who were in a concerted way taking over families, communities, and nations. "Evidence" of such a network often came from memories of children who recalled being forced to take part in bizarre, murderous, blood-drinking, or sexual rituals. What was eventually learned was that such memories could be induced by well-meaning therapists or ministers, and had no connection with real events in the past. The McMartin Preschool trial was the longest and most expensive ($15 million) trial in U.S. history, and ended in no convictions; the ritual abuse allegations stemmed from a mother who had a weak hold of reality, and they grew and grew as people worried about them.

Ellis demonstrates that worries over the blood rituals of Satanism have the same characteristics as the grosser forms of anti-Semitism, and indeed those warning about one are often warning about the other. Beliefs in conspiracies are so broad and so impossible to disprove that those who insisted that Satanists were taking over the world often bought into the ancient idea that the Illuminati were controlling things, even stage-managing Jesus' crucifixion. From there, it is a short step to insisting that vampires are rising from the graves, and that Satanists / extraterrestrials / government agents are mutilating cattle on the great open plains. Such folklore sounds daffy to me,
but some people’s daffiness is other people’s bedrock of belief.

Ellis is particularly good at describing the careers of two main players in the Satanic Panic. John Todd began giving his testimony to eager anti-Satanists in 1968. He told the history of his participation in the Satanic and neo-Pagan scene, impressing especially young listeners with gory details of frightening ceremonies. Of course, he received Jesus and that all changed; he not only was sponsored to testify all around the country about his being saved, but he warned listeners about the Illuminati and Jews. He was an advisor to Jack Chick, who makes the ubiquitous salvation-inducing comic books, and it was Chick who hired lawyers when Todd got in trouble for organizing a coven of teens and raping one of them. Todd’s downfall was welcomed by Mike Warnke, who insisted that Todd “could possibly turn into another Jim Jones.” Todd had previously accused Warnke of stealing his material, as Warnke was on the same circuit with the same sort of grisly “I was a Satanist” stories. Warnke's stories turned out to be as fraudulent as Todd's, and he was exposed by a couple of fundamentalist reporters. The Christians who exposed Todd and Warnke, however, took pains to say that Satanism was an active and real threat.

*Raising the Devil* is an academic work, well documented and organized. Ellis tries to illuminate the role of the folklorist in examining these sorts of belief, and realizes that he and his fellows have the difficult road to follow of accepting folklore (even if it is patently untrue) as a force between small numbers of individuals, while they also have to confront institutions that would harness folklore for political or religious change. His academic prose is leavened by the strange subject matter. For instance, the Governor of Colorado is quoted as saying that cattle mutilations were “one of the greatest outrages in the history of the western cattle industry,” and a leader of a coven in England warned about bogus cult groups, as he had heard about one in which members “started getting in prostitutes dressed in rubber gear and there was wife swapping, too. It gives Satanism a bad name.”

From Evil Crones to Goddess Worship
by Rob Hardy

When, as a little girl, the author Candace Savage dressed up as a nurse for Halloween, she flopped. She didn’t feel the part. She was embarrassed. The next year she went as a witch, and felt just fine: “I was attracted by the icy power... the power of angry cursing and ill-tempered laughter, of forbidden knowledge, of fear. Bad-girl power.” She is still attracted. Her succinct history of witches, Witch: The Wild Ride from Wicked to Wicca (Greystone Books) shows a real enthusiasm for her subject. It is also a fine history of how curiously people have behaved when confronting the supposed supernatural, and how fashions can change our view of history.

Savage points out that the law has always taken a dim view of black magic; an Egyptian man was executed for using a stolen magic book to cast harmful spells 3,300 years ago. Roman law, and later Charlemagne’s law, would prescribe death for those who conjured the devil, dried up the milk of cows, inflicted sores or diseases, and the other crimes that would later be ascribed to witches. Surprisingly, the medieval church wasn’t particularly worried about black magic or the women who supposedly practiced it. Priests hearing reports from women who said they had flown during the night and taken part in satanic rituals were encouraged to maintain disbelief. Reasonable men were not to take such things seriously. One priest of the time wrote of such dreams, “Who is imbecile enough to imagine that such things, seen only in the mind, have a bodily reality?”

Well, quite a few people, actually. The church itself lapsed in its wise toleration when it opposed a couple of dissident sects in France around 1400. The sects allowed women to administer baptisms and so on, so in prosecution, the church tortured them until it got confessions of copulating with the devil, riding broomsticks, and eating infants. Empowered by the imprimatur of the Catholic Church that such things really happened, in 1486 two prominent German clergymen produced the famous Malleus Maleficarum or “Witch’s Hammer,” a guidebook against witches and women. Women were stupid and impulsive, and they had insatiable lusts from which proceeded all witchcraft and submissions to Satan. The reformation changed little; Luther himself declared, “I should have no compassion on these witches. I would burn all of them.” Plenty, indeed, were burned, singly and in groups. Witches were seen everywhere if something bad happened; they sowed disease and discord; they were the Devil in female shapes; they were Public Enemy Number One.

Savage describes a number of cases in detail, such as that of the Lancashire Witches. In 1633, ten-year-old Edmond Robinson came home late because, he said, he had encountered some greyhounds that had turned themselves into human crones and took him to see a black Sabbath and a spectacle of witches producing meat and butter by pulling on ropes. A witch craze took Lancashire, and some of the old ladies even confessed to witchcraft and murder, and a Lancashire court found them guilty. The more urbane London court, however, enlisted the investigative aid of the great William Harvey, the discoverer of the body’s circulatory system, and he was unable to find that these were anything but little old ladies. Eventually little Edmond confessed to making it all up because he wanted to avoid being in trouble for arriving late. The women were found to be free of guilt, but they continued to languish away in a Lancashire prison. Witchcraft remained a punishable offense in England until 1736.

The image of the witch was then changed from a vicious devil-worshiper to a foolish little old lady. Thousands of witches had died torturous deaths, but it was eventually recognized that real witches and real witchcraft didn’t exist. This offended many; John Wesley himself said in 1768, “The giving up of witchcraft is, in effect, giving up on the Bible.” The scholars who had produced Malleus Maleficarum, the court system, and the rules about torture were to be forgotten. There was no room in the Enlightenment for toothless old women flying on brooms except to understand them as ignorant crones who were the subject of the rumors of bumpkins.

Witches were too influential just to let them go, however. They became subjects of children’s literature. The Brothers Grimm, for instance, took the view that old folktales were full of ancient truths. Savage shows some of the changes the Grimms made to their stories in order to make them more palatable; but the witch who figures in such tales as “Hansel and Gretel” was the same one that had haunted nightmares for five centuries. Fairy tale witches were ugly, murderous, and cunning figures of maternal hostility. The image fit in with the Victorian teaching that the proper woman had the sole wish of motherhood, and her world was her home.

But also in the nineteenth century was born a woman who did a complete rewrite of witches. Margaret Murray took the view that the witches of old really were witches, practicing an age-old pagan cult and proudly defying the Christian church. Her 1921 anthropological treatise, built on thousands of snip-
UFO Group Claims First Human Clone
by David Bloomberg

The breaking news of last week was that a woman claimed to have had a baby that was a clone of herself. This was announced by Brigitte Boisselier, a “bishop” in the Raelians, a group that worships aliens and believes these extraterrestrials developed cloning as a path to eternal life — among other fairly bizarre things. Mind you, at this point there is no actual evidence that the baby is a clone, but then we’re dealing with a group that thinks the aliens created life on Earth and that the process was explained to Rael, a former race car driver, on a visit to their home planet, so evidence may not be their strong point.

The group has been around for a while. Founded in 1973, it supposedly has 55,000 members worldwide (the cloning was not done in the U.S., since there are laws against it here). It began when Rael — then Claude Vorilhon, says he was visiting a volcano when aliens scooped him up and told him that he was one of the “Elohim” — the alien race that created life on Earth by genetic engineering. Incidentally, the Raelians believe that this “scientific creation” (a term quoted in a State Journal-Register article) represents our real origins — not evolution or religious creationism. Many times we have pointed out to creationists that even if they were to somehow knock down evolution, that still wouldn’t make their brand of creation automatically correct. Here is another group that I bet would love to have their brand of creation taught. I wonder how creationists would feel about that one…

Anyway, like so many other alien stories (see Martin Kottmeyer’s article about the Reptoids in this issue), the Elohim were supposed to be coming soon to share their technology. Indeed, the Raelians have gathered over seven million dollars to build an embassy for the Elohim in Jerusalem. Alas, the Israelis have not let them build it yet. I’m sure that’s what’s keeping us from getting that advanced technology. But even without the embassy, they have a theme park called UFO-land near Montreal. Jeez, sometimes the jokes just write themselves.

In any event, the Raelians formed a group, Clonaid, to create the first human clone. According to them, the baby was created using the mother’s egg and DNA taken from one of her skin cells. This would be close to the method described by Rael that the Elohim supposedly used to clone him. In Yes to Human Cloning, a 2001 book he authored, he said the Elohim took a cell from his forehead, put it into an aquarium-like machine, and then a perfect copy of himself grew in just a few seconds. OK, that last part isn’t similar to anything resembling reality, but at least the skin cell is the same (though there have not been reports of if the skin cell in this particular case came from the forehead).

On the evidence front, an independent lab is supposed to test the DNA from the mother and child sometime soon (perhaps even by the time you read this, though results are not likely quite that soon). More importantly, even if the baby is a clone, the question remains of how it will do. Even cloning animals has had unexpected side effects, and cloning a human is sure to spur all sorts of backlash.

If the baby truly is a clone, expect the government to pass more laws against any sort of cloning (even the type that does not form a viable embryo, but is just used for medical purposes). Even if it is not, the additional attention — especially in association with a group like the Raelians — will still likely cause a negative impact for true scientific endeavors. Indeed, the Chicago Tribune reports that last year the Bush administration delayed a UN vote on a global ban of reproductive cloning because it didn’t include a similar ban on cloning for research.

And even if the baby is not a clone, Rael has managed to once again get his UFO movement onto the front pages of newspapers all over the world. He even gloated about it in his 2001 book, saying that a minimal investment got him millions of dollars worth of advertising. Let’s face it, how often does a UFO cult get onto the front page of the newspaper? Thankfully, it’s quite rare — and usually only when they’re killing themselves. But by claiming to have created the first human clone — whether true or not — they get publicity, which turns into money and probably new members as well.

Hmmm. Maybe that should be the next REALL fundraiser. I don’t suppose there are any volunteers? Nah. Didn’t think so.
